

4-level distribution box

Overview

The box features 411 wiring terminals across four separate levels, with isolation barriers between each terminal block to prevent accidental contact and short circuits. Easy to install: Adopt the DIN rail installation method, and the two screw holes at both ends of the terminal are used to attach it in the correct position, quick and convenient to install, suitable for electrical engineering. From power and signal distribution to I&C applications and complete room. [Space saving Design] Compact body with multiple splitting heads maximizes wiring space. [High Conductivity and Fire Retardant] The box features brass conductive housing. ***High QualityThe box adopts brass conductive and flame retardant housing, the maximum withstand current is 100A. Transparent dust cover design, dust-proof insulation, you can know the internal wiring state without opening the cover Would you like to tell us about a lower price?

4 rangées avec. The 4 hole distribution box represents a fundamental component in modern electrical infrastructure, designed to efficiently distribute power from a single source to multiple circuits or devices. This compact yet robust electrical enclosure features four strategically positioned outlets or. ABS plastic surface distribution box, with 4 modules in line. Designed to be installed on a flat surface.
