

A switch that can connect to multiple broadband lines

Overview

An Ethernet switch is a multiport networking bridge that uses packet switching to simultaneously receive and forward data in a LAN. This qualifies it as a “full duplex” device, as it intelligently receives and transmits the data packets at the same time, resulting in a faster. Of course we have the option of a leased line but for 12Mbps symmetrical upload/download we'd be looking at around £500 per month compared to £15 per month for normal or fiber broadband.
