

# **Australian Solutions Optical Modulator 800G**

## **Overview**

The 800G OSFP 2\*FR4 optical transceiver represents a pivotal shift in high-density networking, providing the necessary bandwidth to support the explosive growth of artificial intelligence and machine learning workloads. First Stage: Introduced an 8x100G dual interface (both optical and electrical), which hit the market in 2021. Third Stage: Slated. For general purpose, Fiber2C solutions consist of 800G OSFP, 800G QSFP-DD, 400G QSFP112, 400G QSFP-DD, 200G QSFP56, 100G QSFP28, 50G QSFP28, 25G SFP28, 10G XFP, 10G SFP+, SFP and CSFP series. Based on the purpose and applications, these solutions can be generally classified as Data Center Solution. Being an early adopter of high Ethernet rates (e., 800G) and next-gen coherent optic technologies (800ZR/ZR+/LR) comes with unique challenges. Within the first few centimeters of its optical engine, the TS-OP-318H-01C. An 800G module is a high-speed transmission module commonly used in data centers, communication networks, and other areas requiring high-density data transmission and high-speed data processing. It boasts the extraordinary ability to process 8 billion bits per second, more than doubling the. Coherent optical technology has evolved rapidly, going from 40 Gbps (2008~2009) to 100 Gbps (2010~2011), from hard-decision forward error correction to soft-decision forward error correction (2012~2014), and from 200-Gbps flexi-rate interfaces (2015-2017) to 400 Gbps (2016-2018), and then to 600.
