

Austrian AC to DC power supply low noise

Overview

It is an evolution of the previously built low noise power supply. Built with high-quality discrete components, it provides clean, interference-free power to your devices. Made in a black steel housing with integrated IEC socket with switch and fuse. But with growing current demands for these rails, designers are struggling to include LDOs because of their size, power loss, thermal rise and cost. This document. Whether power supplies, laboratory programmable power, fuel cells & batteries, or vehicle lighting - with our products we offer state-of-the-art solutions for every requirement. Our customers benefit from expert consulting, excellent support, and a level of service that goes far beyond standard. I operate an MEG system (extremely sensitive magnetic sensors for measuring brain activity) and I recently found that the DC power source that feeds into our magnetic shielded room (power used for moving the MEG/chair/bed - thus required), produces 60 Hz line noise detected by the sensors. Our AC/DC power supplies also significantly benefit Medical applications needing low leakage current of 40 to 100uA, all with 4KV reinforced insulation. This freedom permits output filtering methods that are usually impractical.
