

Butterfly-shaped fiber optic cable splice network cable

Overview

Fusion splicing is a popular method of connecting butterfly-shaped optical fiber cables. The two fiber cables are stripped of their protective coatings, and their bare ends are aligned and then fused together using a fusion. FTTH Butterfly Optic Cables were designed to eliminate those compromises. They are called butterfly-shaped due to their unique design, which features a flat shape with two parallel fiber ribbons running down the center. Briticom™ offers a wide range of indoor and outdoor fibre optic distribution, patching and consumer cables – including Plenum, Riser and LSZH in all diameters. These are used to provide links to protocols such as FTTH, FDDI, 10 Gigabit Ethernet, ATM. Briticom® offers Armoured Butterfly-Shaped. The versatility of butterfly cables is showcased through their wide array of applications. Here are some key areas where butterfly cables shine: Data Centers and Networking: Butterfly. Butterfly-shaped optical fiber cables, also known as ribbon fiber optic cables, are a type of fiber optic cable that contains multiple fibers within a single flat ribbon. An additional steel wire strength member is attached to the outer side, followed by extrusion with black low smoke.
