Product system and structure design is becoming increasingly sophisticated, which takes the form of: Improve the external appearance and structure of charging pile casing, optimization of. The external charger converts input external alternating current (AC) into direct current (DC) power mode required by the EV ecosystem and stores it in the battery. Drivers who are accustomed to filling up gas tank in five minutes are not keen to wait hours for their vehicles to be on the road. The New Energy Charging Pile Intelligent Monitoring System uses the P5B series industrial touch panel as the main control device, establishing a stable communication connection with the charging pile meter via the MODBUS RTU protocol to achieve precise collection and management of power data. Common types include single-pole, double-pole, and illuminated rocker switches.
