

Congo 100g Multimode Optical Module

Overview

The QSFP28 SR4 optical module complies with the IEEE 802.3bm standard for 100G Ethernet. It features 4 independent transmit and receive channels, with each channel supporting a data rate of 25G, delivering an aggregate bandwidth of 100G. The Cisco 100GBASE Quad Small Form-Factor Pluggable (QSFP) portfolio offers customers a wide variety of high-density and low-power 100 Gigabit Ethernet connectivity options for data center, high-performance computing networks, enterprise core and distribution layers, and service provider. The QSFP28 (Quad Small Form-factor Pluggable 28) transceiver is a compact module that can be hot-swapped and is designed to support high-speed data transfer in today's network. With up to 100 Gbps speeds, it is frequently used within data centers, enterprise networks, and telecommunications. 100G QSFP28 transceivers are high-speed, compact optical transceivers designed for data centers, enterprise networks, and high-performance computing environments. These transceivers support data rates up to 100 Gigabits per second (Gbps) and are commonly used for high-density 100G Ethernet and. Among the variety of solutions available, the QSFP28 100G multimode module distinguishes itself with its versatility. Critical contenders in this category include the 100GBASE-SR4, 100GBASE-SR BD, 100GBASE-SWDM4, and 100G QSFP28 BiDi SR1. With a plethora of models and standards available, ranging from various packaging to transmission types, buyers often find themselves navigating a complex landscape.
