

Connect the optocoupler relay module to the lamp

Overview

This circuit uses an ESP8266 NodeMCU to control a relay via a PC817 optocoupler and BC547 transistor, allowing for the switching of an AC-powered bulb. The circuit includes a protective diode for the relay, an LED indicator, and employs resistors for current limiting and signal. In the following post I have explained how to drive a relay by using an isolated method, or through an optocoupler device. We will learn three methods, first method is by connecting relay directly with the optocoupler output pins, second method is by using external PNP transistors, and third method. A relay with an optocoupler combines the functions of a relay and an optical isolator, allowing for the control of high voltage or high current circuits while providing electrical isolation from the control circuit. The optocoupler uses light to transmit signals between its input and output. The optocoupler is extensively utilized in computer terminals, thyristor control devices, measuring instruments, copiers, automatic ticketing systems, and household appliances like fans and heaters for transmitting signals between circuits. From my understanding, when the modul receives DC current (5V), it's going to turn on the other circuit and turn on the bulb. Some time they are more convenient to buy this board for quick connections without worries of DIY projects. These relays are usually active low devices (meaning the relays are activated with low voltage logic). Additionally, there is a jumper-based.

Article Content

How to Use Relay with optocoupler: Examples, Pinouts,

Learn how to use the Relay with optocoupler with detailed documentation, including pinouts, usage guides, and example projects. Perfect for students, hobbyists, and

User's Guide: 12V 4-Channel Relay Module with Optocoupler

Overview This module allows microcontrollers to control high-voltage devices (AC or DC) using opto-isolated relays. Each channel can be triggered by either HIGH or LOW logic, selectable

How to design a relay circuit for Arduino and ESP32

Circuit explanation In this relay circuit, we use an optocoupler (PC817x) to separate the high-voltage part of the circuit (relay part) from the low-voltage part. We

Arduino Tutorial: 2-Channel Optocoupler Relay Module

High-quality SONGLE relay featuring a single pole double throw (SPDT) configuration, with one common terminal, one normally open terminal, and one normally closed

Guide for Relay Module with Arduino

We make a brief introduction to the relay module and build a simple project example with the Arduino. The example we'll build shows how to control a

5V 3 Channel Relay Module Shield for Raspberry Pi: A Deep

The 5V 3 Channel Relay Module Shield reliably controls three high-power AC devices simultaneously with a Raspberry Pi, offering stable, isolated, and safe operation when properly powered and

Relay 12V with Optocoupler, how to?

Move the "Level Trigger" jumper on the module to the "L" position. Connect the relay module to your 12V power supply. Take a short piece of wire

How to Connect a Relay through an Opto-Coupler

How to Connect a Relay through an Opto-Coupler Last Updated on June 14, 2022 by Swagatam 56 Comments In the following post I have explained

Rag-With-IOT-/data/engineering/relay_module.md at main ...

What it is A relay module is a board that contains one or more relays along with all the extra components (transistors, diodes, and LEDs) needed to safely connect it to a microcontroller like an Arduino.

Arduino Tutorial: 2-Channel Optocoupler Relay Module

The optocoupler is extensively utilized in computer terminals, thyristor control devices, measuring instruments, copiers, automatic ticketing systems, and

Relay Module | How to make a Relay module with

Relay modules play a important role in controlling high-voltage devices using low-voltage microcontrollers or digital circuits. They act as a bridge between the low

Optocoupler Relay Module Circuit Diagram

The most common setup of an optocoupler relay module includes a relay block, where the device is wired and connected, and the optocoupler itself,

Relay Module Optocoupler: Schematic and Working

This article shares the Relay Module Optocoupler Schematic and Working principle. Cheap DIY relay module project with guidance.

How to Use MKE-M05 Optocoupler Relay Module: Pinouts, Specs,

Learn how to use the MKE-M05 Optocoupler Relay Module with detailed documentation, including pinouts, usage guides, and example projects. Perfect for students, hobbyists, and developers

Help understanding optocoupler wiring

Hi all I have a project with a 4 module optocoupler relay, controlled by an esp32 Arduino. I wired the project following the instructions to isolate the

How to Design Relay Module using Optocoupler || Relay Module Circuit

"In this video, you'll learn how to design a relay module using an optocoupler, perfect for isolating control circuits from high-power loads. We'll guide you through the complete circuit diagram ...

Arduino with NeoPixel Optocouplers Controlling Many Relays

Use a strip of NeoPixel LEDs with LDRs as self-made optocouplers! This project is about controlling multiple relays or other actuators from a single Arduino output pin.

How to make the connections to the 1 channel

I want to light a bulb connected to the socket by using an 1 Channel Optocoupler Relay Module which accepts an input of 5V. From my understanding, when the

A Brief Analysis of Optocoupler Relay Wiring

Optocoupler relays are indispensable components in the electronics field, offering dual functions of photoelectric isolation and signal conversion. They consist of an optocoupler and a relay, using light

Arduino with NeoPixel Optocouplers Controlling Many Relays

In this example 4 optocoupler circuits are used controlling 4 relays connected to one 230V lamp each. The output pin used is GPIO PIN 21 and the relays are controlled via pixel numbers

Relay Module and Optocouplers?

That relay module is made to connect directly to Arduino's 5volt, ground and a digital output. If for some reason you want to use opto isolation???

5V 2/4/8 Channel Relay Modules with Optocoupler

Simply supply the module with 5V DC and GND through the terminals below. Additionally, connect the 5V active low input pins (Optocoupler circuit
