

Core Layer Switch 2448

Overview

MES2448P series switches with PoE support provide end users connection to networks of large enterprises, small and mid-sized businesses and service providers via 1G/10G interfaces. The switches support Virtual Local Area Networks (VLAN), multicast groups, and have advanced. The Cisco Catalyst 1000 Series switches are fixed-configuration, Gigabit Ethernet switches that provide entry-level enterprise-class Layer 2 access for branch offices, conventional workspace, and out-of-wiring closet applications. What Should We Consider When Choosing the Best Gigabit Switch?

To choose the best Gigabit switch, you should know how many ports you want in the first place. It supports comprehensive QoS, enhanced VLAN functions, Ethernet Ring Protection Protocol, classified bandwidth control, advanced security features, OAM (Operations, Administration and Maintenance). What is a Access Switch?

The access switch is the network switch that connects the access layer with the subnets. The subnets are integrated with access devices like routers, IP devices, control, and monitoring panels, etc. An access layer of a hierarchy network features multiple subnets to which.

Historical question: Why switches have 24/48 ports?

There are 10 and 12 port switches out there, and many 24 or 48 port switches have extra SFP slots, so they're actually 28 or 52 ports. Most of it, as I understand,
