

DNF requires a PoE switch

Overview

Power using Power Over Ethernet (POE). No additional connections are required. A Power over Ethernet (PoE)-capable switch port automatically supplies power to one of these connected devices if the switch senses that there is no power on the circuit: A powered device can receive redundant power when it is connected to a PoE switch port and to an AC power source. On models AIS-24 and AIS-44, wire 2-pin. There are dedicated AV switches that are the easy/foolproof way. For example Luminex, Ghost, Yamaha, the Netgear M4250, M4300 and M4500 series and probably others as well. But in theory any recent managed switch would suffice. This eliminates the need for separate power adapters, reducing cable clutter and. Power over Ethernet (PoE) is a newer way to provide DC power while also accommodating data through an Ethernet cable.
