

Dimensions of earthquake-resistant cabinets for power systems

Overview

Available in 24 configurations across 42RU, 44RU, and 48RU heights with depths from 30" to 48", each cabinet is rated for 3,000 lbs static load capacity with seismic load ratings from 770 to 877 lbs depending on configuration. KabinPLUS KS 19" Data Center Seismic Rack Cabinets have been designed to offer high flexibility and efficiency with a robust and anti-seismic core construction for data centres to handle Zone 4 earthquake environments. For different dimensions please contact your customer representative. It is designed for secure, high density server and networking applications in IT environments that are earthquake prone or subject. Built on the successful KabinPLUS platform, KS Series seismic cabinets are designed to keep information technology equipment safe in facilities located in areas with high earthquake risk. All standard features of KD Series cabinets such as door perforation, color options, outer dimensions are also. SEISMIC cabinets are used in all areas where batteries need to be installed in an earthquake-proof manner. The frame of the SEISMIC cabinets is welded. The welded-in back panel results in a very stable cabinet system that will keep your battery safe and. Belden's Server and Switch Cabinets are certified to Seismic Zone 4 requirements, passing vibration and shock testing per GR-63-CORE Network Equipment Building System (NEBS) requirements with no structural damage in a certified lab. Every day, hundreds of small to medium earthquakes rattle homes, buildings and other high-value structures globally.
