

Disable the switch from accessing the network

Overview

1x authentication on your network, and/or disable all your unused switch ports. How do I restrict helpdesk or users from plugging hub or switch on the network. If Hub/Switch is connected to the switchport then port turn down or disable. cheers
TOM 01-16-2010 04:24 AM Hi Tom, Genrally BPDU guard and. Setting up a network switch to automatically shut off a port when a specific device connects to the network is a crucial aspect of network security and management. This proactive measure helps prevent unauthorized or potentially harmful devices from accessing the network, safeguarding sensitive data. Yes, you can definitely keep your PC on your home network but block it from accessing the Internet, and it's not too hard! (Optional) You can still set a DNS if needed inside your LAN, but leaving it blank also helps block Internet. Basically, when you implement 802.1X authentication, it works exactly as it should, if somebody were to disconnect an access point and instead connect a switch to the outlet, and then connect the AP.
