

Do aerial optical cables require accessories

Overview

Dead-end / anchor assemblies and suspension clamps — at span ends, dead-end clips or anchors secure the cable or messenger; choose rated hardware for expected tension and environmental class. However the splice closures are usually mounted on the poles. The cable is spread out under the poles directly from the. All-Dielectric Self Supporting (ADSS) cables can be erected in close proximity to power transmission lines. This of course, allows for pole sharing, which of course, reduces installation costs and speeds-up deployment. Before beginning aerial installations, the design of the cable plant must be. This article explains the common aerial cable types, the hardware you'll actually use on poles and span ends, and the safety practices that keep crews and the network safe — nothing more, nothing less. Aerial fiber installation places optical cable on poles or other supports rather than underground. That is why aerial installation requires a ton of different tools to make the job in the sky easy as can be! Some of the common tools include aerial storage for cables; telescoping poles; fiber heat shrink tube; brackets; blocks; cable saddles; fiber suspension clamp; cable rings, horizontal fiber.
