The tails as a self-regulation tool, allowing users to feel calm through satisfying tactile play. The Tail Company - Bring life to your Cosplay or Fursona! Get a Bundle and SAVE! Every item is handmade to order so we can customize each one for you. App controlled + Removable covers + Built in rechargeable power + USB charged + Custom cover included Reacts to sound and head tilts + App. Harnesses comprise one or more tails (or cables) of fibre optics which transmit the light from the light source over a distance. Harnesses may be terminated with. □ Enjoy Magic Visual Illusion □ This beautifully clever yet simple gazing ball spiral tail is designed to create a stunning optical illusion. The glass ball appears to float and dance in the air as the magic glass ball spiral tail spins, creating a magical visual illusion that has a calming and. End emitting fibers, also known as “end glow”, transmit light to the end of the cable with very little light displaying along the strand itself. End emitting fibers can be modified to create a “sparkle” or “starry night”. Many of the latest high-end luxury cars have tail lights with what appear to be neon tubes. Instead of individual bulbs, these lights have unique bands that emit a neon-like glow. However, these lights have no neon gas, but instead owe their appearance to optical fibers, which can be made of thin. A fiber optic tail light is an advanced automotive lighting system that uses thin strands of glass or plastic—known as optical fibers—to transmit light from a central source to various points in the taillight assembly.
