

Engineer measures for grounding distribution boxes

Overview

The International Electrotechnical Commission (IEC) has developed standards that guide engineers, installers, and safety officers in designing safe and reliable earthing systems. Among these, IEC 60364 Earthing Requirements are the most widely adopted worldwide. IEC 60364 is a global benchmark for. The grounding system provides a low-impedance path for fault current and limits the voltage rise on the normally non-current-carrying metallic components of the electrical distribution system. Each DISTRIBUTION BOX and controller must be grounded. 26 mm² (10 AWG) ground wire must be used, and in all other markets a 6 mm² must be used. SEC Distribution System extends from the MV (33 kV, 13.8 kV) feeder outlets of HV / MV Substations down to SEC Customer interface including KWH-Meters and meter boxes. To provide. Any engineer dealing with power supply networks needs to understand the basic principles of grounding system design and its role in ensuring safety of equipment and personnel.
