

Fiber optic speed dropping when entering router

Overview

Restarting your router is one of the easiest ways to resolve minor internet speed issues. Often, these devices just need a fresh reboot to clear out temporary glitches and restore your connection to full speed. Wait for about 60 seconds to make sure it fully. Fiber optic networks are celebrated for their speed and reliability, but even the best systems can encounter problems. Plug it back. I was expecting dl speeds of 900+ on wired connection and 600+ on wifi when close to router, what I am getting is 100 (dl) on wired and max of 350mb on wifi when sitting on top of the router, other rooms in my apartment are getting 50-200~ on the wifi network. When the technician was here he. You need to be checking the status of the ONT not just the router when your connection drops, if the ONT drops out then the router will also drop out. if you get a red LOS light on the ONT, even briefly then the problem is the optical network dropping, if the ONT PON light stays solid green then. Fiber internet brings the fastest speeds for an online experience with minimal buffering. This is frustrating, especially with slow gaming or during streaming. However, even the most advanced technology can experience performance degradation.
