

## Find connectors for long-distance optical cables

### Overview

This guide explores the most common fiber connector types used in optical transceivers—LC, SC, FC, ST, and MPO/MTP—and highlights how LINK-PP integrates these connectors into its diverse range of optical transceiver products. Unlike fiber splicing, which is permanent, connectors allow for easy connection and disconnection of cables, making them ideal for maintenance and flexibility in. Fiber optic connectors play a critical role in optical transceivers, linking transceiver modules to fiber optic cables for seamless data transmission. When selecting the appropriate optical module for a network application, one crucial factor to consider is the type of fiber connector it employs. The connector mechanically orients the fiber cores, allowing light to pass and travel through. TE's fiber optic connectors accommodate 10G Ethernet — with the capacity to handle next-generation 40G and 100G when needed — without the severe distance limitations of copper cable. However, with several connector types available, each with unique designs and uses, it's important to understand which one fits your application best.
