

Grade A fiberglass tail

Overview

Four-harness fiberglass fabric for extra durability. Finished in an automotive grade urethane primer; light gray on the outside, black on the inside. Note: The stock seat can be used. WEICO's AC sleeving is manufactured of a closely woven electrical grade fiberglass braid thoroughly impregnated and continuously coated with a modified acrylic resin. The resultant sleeving possesses excellent flexibility, cut-through resistance, and is highly resistant to mechanical abrasion. Silicone Flex Glass is very abrasion resistant and is ideal in heavy duty applications that require outstanding mechanical and electrical properties. Available in NEMA sizes #24 (AWG) to 1". Various glass chemical compositions described below from ASTM C 162 were developed to provide combinations of fibre properties directed at specific end use applications.
