

## High Voltage Busbar Withstand Voltage Test Standard

### Overview

The IEC 61439 series of standards sets out the regulations for power distribution boards as well as assemblies for power distribution in public networks, construction sites, and for prefabricated busbar trunking and cabling systems. The test shall be carried out according to IEC 60068-2-2 Test Bb, at a temperature of 70 °C, with natural air circulation, for a duration of 168 h (7 days) and with a recovery of 96 h (4 days). - The UV radiation causes deterioration of synthetic material use for enclosures. Procedure: UV Test. IEC 61439 is a standard developed by the International Electrotechnical Commission (IEC) that covers design verification for low-voltage electrical products and assemblies. The IEC 61439. The IEC standard for busbar sizing provides detailed guidelines to help engineers select appropriate busbar dimensions. I'll also share practical advice based on real-world experience with busbar.
