

High-voltage distribution boxes all have circuit breakers

Overview

Inside these boxes, you've got some key parts like circuit breakers, transformers, and protective relays. The circuit breakers are pretty much the safety guards—they kick in automatically to cut off power if something goes wrong or if there's an overload. High-voltage products are the physical backbone for reliable, safe, environmentally-friendly and economical power transmission. This brochure showcases our comprehensive portfolio of high-voltage products: circuit-breakers, disconnectors and earthing switches, surge arresters, instrument. A high-voltage circuit breaker is designed to make, carry, and interrupt electric currents under its rated voltage. Both categories include Blue products which use zero F-gases. It typically applies to power systems at 36 kV and above. Think of them as the main hubs that make sure electricity gets to where it's needed, efficiently.
