

Home electrical panel trips and overheats

Overview

An overloaded electrical panel will struggle to manage your home's electrical load and often shows clear warning signs during everyday use. Repeated breaker trips, flickering lights, excessive heat, or unusual odors indicate that the panel or circuit capacity has been exceeded. An electrician had a customer with a very common problem—an overheated electrical panel. The electrician was called in to troubleshoot an electrical panel with 42 circuit breakers. Overheating inside electrical panels is a leading cause of unplanned downtime in both industrial facilities and data centers. This article delves into understanding the root causes of this issue and offers practical DIY solutions to safeguard your home. Understanding what causes panel overheating and how to prevent it will allow you to address concerns with confidence even if you require the help of a professional electrician.
