

How many years can an industrial-grade switch be used

Overview

On average, an industrial switch can last anywhere between 10 to 15 years, although this can vary based on several factors such as the operating environment, the quality of the switch, and how well it is maintained. Here's a detailed look at the factors influencing the lifespan of an industrial. The industrial PoE switch has a longer life span of up to 10 years (MTBF: 300,000 hours), while the commercial PoE switch can only last for 3-5 years (MTBF: 50,000 hours). Moreover, the commercial PoE switch only has one power supply, while the industrial switch normally has two power inputs as. Also, the lifespan of these switches can range from 2 to 5 years. Industrial-grade switches are a little more costly than normal switches, they have many advanced features that not only keep your network active but also secure through advanced protocols. Also, these switches have a longer lifespan. They'll definitely show their age in the last couple years, but usually won't create drag on a business unless it's specifically focused on data-heavy operations or going all-in on video-based technologies.
