

How to aggregate VLANs after dividing them into VLANs on a switch

Overview

In this video, I walk you through configuring link aggregation (LAG), setting up a LAG group, and assigning it to a VLAN. By the end, you'll understand how to. Alternatively, you can enable VLAN aggregation to aggregate VLAN 21 and VLAN 22 into super VLAN 2, and VLAN 31 and VLAN 32 into super VLAN 3. After Proxy ARP is configured on Switch, the sub-VLANs in each super. Can i create smaller VLANs from a VLAN?

and How to do that?

Ex: I use a multiple switch 1 to create 2 VLAN (vlan1 and vlan2) and assign 1 ip address to each VLAN (vlan1: 1. If I duplicate this on the other switch, will this: Allow vlan 3 on both switches to pass traffic on ports 17,18,19,20,21,23 via ports 22&24 (I. Link aggregation is the process of combining multiple links so that the links function as a single link with higher bandwidth.
