

How to check the IP address of a fiber optic switch

Overview

There are several methods to find the IP address of a switch. One common approach is to check the switch's documentation or labels, as manufacturers often include the default IP address on the device itself. Finding the IP address of your network switch is crucial for a variety of tasks, from configuring its settings to troubleshooting network connectivity issues. On Windows, you can do this by pressing the Windows key + R, typing. Connect to the switch using telnet/SSH Once inside the switch you can use the following command show mac address-table address <end-user-address> You put here the MAC address as seen on show ip arp command in format AAAA. CCCC at this point you find an interface : or that interface is the. Is there a command that I can use through Putty to figure out the IP new IP address of the switch?

Thank you! Edit: The switch is still isolated and is not connected to anything other than the workstation that I am using to configure it. IPv4 addresses assigned to individual logical switches are assigned to IP over Fibre Channel (IPFC) network interfaces.
