

How to connect the optical port to an optical switch

Overview

The SFP port is a built-in optical port of a Gigabit Ethernet switch, so it cannot be directly connected with a twisted pair or a jumper. It needs to be connected to an optical module first, and then it can be transmitted with an optical fiber patch cord. The objective is to run 1 or 2 additional optic fibre from the. Most gigabit switches are equipped with both RJ45 electrical ports and SFP optical ports. The technology behind these switches is diverse, including mechanical, MEMS. - Did you mean the patch lead?

otherwise you'd need right length LC-LC patch leads as well. there are few variations and if you need one specific type, you could have "Multimode 50/125 OM3 type fibre cable with LC/LC terminators" I'd just start with one link first and test the connectivity, If its.
