Physical layer management systems-intelligent patching systems-are combinations of hardware (patch panels and patch cords) and software that can generate cost savings resulting from: accurate documentation; reduced downtime; more efficient performance moves, adds and changes; more. Belden PatchPro® offers a complete intelligent ready physical layer management system that uses RFID (radio frequency identification) technology for wireless identification of individual patch cords and real-time monitoring of unintended physical changes in network infrastructure. Belden offers a. As networks scale to accommodate growing digital demands, Intelligent Patching —a key component of Automated Infrastructure Management (AIM) —is transforming how physical layer connectivity is monitored, managed, and maintained. By automating the process of patching (connecting network equipment. A PCU (Panel Control Unit) is equipped at the front of the patch panels and scans the area in front of each port. This solution will enhance security by monitoring for equipment disconnects and cyber security in enterprise and colocation data centers as well as.
