

Key Points for Optical Cable Duct Construction

Overview

Signage and dimensioning of work areas. Cable loops location identification. Laying in outdoor. Duct fiber optic cables—often called “duct fiber”—are specialized optical cables engineered to be installed within pre-existing ducts (hollow tubes) rather than buried directly in soil or strung from poles. These ducts act as a protective pathway, shielding the fiber from environmental hazards. Corning Optical Communications cable specification sheets are available which list the maximum tensile load for various cable types. The maximum pulling tension for stranded loose tube cable and ribbon cable is 600 lbF (2,700 Newtons). The installation process is influenced by local conditions, local climate, customer's existing procedures, and customer requirements. 0, was redesignated as ITU-T L.
