

Mauritius Span Bridge

Overview

The SAJ Bridge is designed to cross a steeply sloping terrain while ensuring optimal safety conditions. The construction of the extradosed bridge, with a main span of 170 m, is based on the mobile formwork method, which is suitable for long-span concrete structures. On the 10th of March 2024, the Sir Anerood Jugnauth (SAJ*) extradosed bridge spanning Grand-Rivière-Nord-Ouest, between Sorèze and Coromandel in Mauritius was officially opened to traffic. Note: Completion year and longest suspended span length may not be known for all bridges listed below. Located between Sorèze and Chebel, the structure redesigns traffic between the two major roads, the M1 motorway. The British Governor Sir Cavendish Boyle built the Cavendish Bridge in 1911 to connect Mahebourg to the village of 'Ville Noire.

The island of Mauritius is subject to major cyclonic winds and the gorge being crossed. Particular Design Features for a Long Span Cable-Stayed Bridge over the Harbour of Port Louis, Mauritius
