

Multimeter photocoupler

Overview

Test a photocoupler by setting a multimeter to resistance mode. A good one shows high resistance (OL) with the input LED off and low resistance with it on. They use light to transmit signals, which drastically reduces the risk of electrical shock or damage. This isolation is particularly vital in high-voltage applications and sensitive. Optocoupler is one type of ICs, It isolates input and output section by using optical technology this feature increase safety of circuit. Optocoupler has many part number, different part number has different output type so before checking it has to use part number to research with datasheet and.
