

Multimode fiber FC-ST

Overview

Diamond SA developed the E2000 connector. Also known as an LSH connector, it features a spring-loaded shutter mechanism to protect the ferrule end face from dust and laser beams. The E2000 fiber optic connector has a one-piece design for easy and quick termination and is suited for high-safety and power applications. The fiber connector is called a fiber optic or optical fiber connector. It is a precise coupling device that joins fiber optic cables quickly, enabling faster connection and disconnection than splicing. The connector mechanically orients the fiber cores, allowing light to pass and travel through the cable without interruption. Unlike electrical conn. The SC (Standard Connector, Subscriber Connector) is a fiber optic connector released by NTT in the mid-1980s. It is a snap-on square connector with a simple push-pull motion, similar to the push-pull latching mechanism of ordinary audio and video cables. It uses a 2.5mm diameter ferrule, twice the size of the later-developed LC connector. Initial. LC stands for "Lucent Connector." Like its name, it was developed by Lucent Technologies. The LC connector has a 1.25mm ferrule, which is half the size of the SC. This small form-factor connector is extremely popular in datacoms and is perfect for high-density applications. Nowadays, many people prefer high-efficiency cabling with LC fiber optic co. FC stands for "ferrule connector". It is the first fiber optic connector to use a ceramic ferrule. However, unlike the plastic-bodied SC and LC, it uses a circular screw-type fitting made of nickel-plated or stainless steel. The end face of the FC fiber optic connector is inserted using an alignment key and then screwed into the adapter/jack using.
