# Network security devices offline

## Overview

Security cameras can go offline for various reasons, including weak Wi-Fi signals and outdated firmware. Ensuring they have updated. Periodically download the latest Defender security intelligence updates from the Microsoft website. Use a local network share or removable media to distribute these updates to the offline devices. Create Update Scripts: Write PowerShell scripts to automate the installation of updates on offline. I have two FTDs that have been offline for more than a year, and now I can deploy the configuration to change the IP address of the WAN interface to connect to the internet. I now have internet on site, but from a different ISP. We kept working at it and found an interesting solution. d:443 read: connection reset by peer [for support diagnosis: requestID: 7e761b68-a878-915e-af11-2b561484e0e9] "Connection reset by peer"?

Not sure where to go.
