

Networking of GPON devices

Overview

A GPON network consists of OLT (Optical Line Terminals), ONU (Optical Network Unit), and a splitter. The splitter will divide the signal when needed. This document is not restricted to specific software and hardware versions. 984 is the series of standards that define the architecture and operation of gigabit -per-second-capable passive optical network (GPON). It is commonly used to implement the link to the customer (the last kilometre, or last mile) of fibre-to-the-premises (FTTP) services, using a. GPON is the reliable solution, optimizing costs while delivering exceptional broadband through Superior quality of service (QoS),dynamic bandwidth allocation capabilities and flexibility. The OLT takes in all of the optical. GPON is a leading standard of Passive Optical Network (PON) – a type of point-to-multipoint network technology that delivers broadband access to the end user via fiber optic cable. Here, the term 'Gigabit' in GPON denotes the maximum speed it provides which is typically 2.
