

New switch partitions VLANs for access to the switch

Overview

Now, after separating the network into different VLANs, this means that we have created separate broadcast domains (one for each VLAN) and now hosts within the same VLAN can freely communicate between them (provided they belong to the same Layer 2 VLAN). Now, after separating the network into different VLANs, this means that we have created separate broadcast domains (one for each VLAN) and now hosts within the same VLAN can freely communicate between them (provided they belong also to the same Layer 3 subnet). On the other hand, hosts that belong to different Layer 2 VLANs can't communicate between them. Switch 1 Configuration: ! Create VLANs 2 and 4 in the switch database Switch1# configure terminal Switch1(config)# vlan 2 Switch1(config-vlan)# name Accounting Switch1(config-vlan)# end Switch1(config)# vlan 4 Switch1(config-vlan)# name Engineering Switch1(config-vlan)# end ! Assign Ports Fa0/1 and Fa0/2 to VLAN 2 Switch1(config)# interface fasteth0/1 Switch1(config-if)# vlan 2 Switch1(config-if)# end Switch1(config)# interface fasteth0/2 Switch1(config-if)# vlan 2 Switch1(config-if)# end If you want to verify that the physical interfaces are assigned properly to each VLAN, then run the following show commands: SWITCH1#show vlan SWITCH2#show vlan.
