

OPGW Optical Cable Precautions

Overview

The specific requirements are as follows: (1) After the optical cable arrives at the material station, the supervision department, the project department and the supplier shall jointly accept the inspection and make a record. (2) Optical cables should be stored upright and 200. Recommendation ITU-T L. 151 refers to the installation of optical fibre ground wire cable. It deals with the factors that should be considered in determining the characteristics of this type of cable, the apparatus that should be used, the precautions that should be taken in handling the reels, and. An optical fiber composite overhead ground wire (OPGW) is a new type of ground cable used in the high-voltage power transmission system that serves as both a conventional overhead ground cable and a communication optical cable. Due to the special structure of OPGW optical cable, it is difficult to repair after damage, so in the process of loading, unloading. This Bulletin provides general information and instructions for consultings and contractors for OPGW/OPPC supplied by Lumpi-Berndorf Draht- und Seilwerk GmbH. These procedures and instructions are intended as general guidelines since each installation of a cable is unique and is influenced by local. development of communities.
