

Opening a hole next to the cable tray

Overview

Use a step drill to drill the hole. These are easy to use and don't pull the workpiece towards the drill so are safer than helical drill bits. It won't be thick enough to give you more than a single thread turn - if that. Use a gland with rubber. When installing electrical systems in commercial or industrial buildings, it's almost inevitable that cables will need to pass through walls, floors, or risers. Whether you're running conduit, trunking, tray, or basket, these services often need to cross between rooms or fire compartments — and maintain spacing or to keep cables in place when the tray is erect the minimum bend radius for cables as they exit the bottom of the cable tray. Edit: Link to datasheet of cable gland: It's built ON to the wall at the back with a supporting beam to rest on and be screwed into, and therefore you can't just put cables down the back, as there isn't a back space to slip down. Now, I can get ahold of a circle drill/hole drill easily and put more holes in for cable management than the. Video is Going to Show how to Create a Wall Opening or Floor Opening for Cable Trays / Ducts / Pipes / Conduits. The screw-on cable trays are available in perforated (MKS, SKS, DKS, EKS).
