

PLC with Servo Power Distribution Box

Overview

The short answer is yes —a Programmable Logic Controller (PLC) can not only control servo motors but also orchestrate their movements with pinpoint accuracy, making them indispensable in robotics, CNC machining, and high-speed packaging. However, the real question is: How does this work? The new production sequence developed by the Italian machine builder Borghi S. Syntegon, a global supplier of process and packaging. Introduction — PLC-Servo Communication Is the Core of Precision Motion Control Modern automation equipment—CNC machines, pick-and-place robots, dispensing systems, feeders—relies heavily on PLC ↔ servo drive communication. For servo-hydraulics in injection molding machines Baumüller has been successfully implementing the principle of the drive-integrated PLC for decades and, with the new drivePLC, has made it future-proof and fit for the IoT. The control cabinets are vertical enclosures with servo drives and other electromechanical components that control or monitor machinery and factory systems associated with it.
