

Protection level of electrical distribution box

Overview

SMICO's IP65 protection rating is one of the common protection rating standards for outdoor plastic distribution boxes. Design requirements for low voltage distribution boxes cover NEC, IEC, and safety standards to ensure reliable, compliant electrical installations. When they fail, everything goes dark. 4kV to the distribution cabinet (primary distribution cabinet), then the outgoing line is led to the distribution box (secondary distribution box) in each building, and finally the outgoing line is led to the distribution cabinet. Power Distribution Board Design refers to the planning and arrangement of electrical components within a panel that distributes electrical power across different circuits. The IP protection rating system power terminal block provides a method to classify products based on the degree of dust, water and collision resistance of electrical equipment and packaging.
