

Removal of Huijue F822 Optical Module

Overview

Before removing or installing an optical or electrical module, ensure that no fiber jumpers are connected to the optical ports or no network cables are connected to the electrical ports on the module. Use a fiber extractor to remove the optical module. Non-certified optical modules cannot ensure transmission reliability and may. Optical port pollution will cause the attenuation of optical signals, lead to signal distortion, and increase in bit error rate, thereby affecting the transmission performance of the optical module (especially long-distance transmission optical modules are more susceptible to the impact of optical. These installation instructions provide overview and specification information for small form-factor pluggable (SFP) modules, as well as instructions for installing and removing SFP modules. The fiber-optic SFP modules contain a laser that is classified as a “Class 1 Laser Product” in accordance. Do not look into bores of Optical Modules or optical fibers without eye protection. Huawei-certified Optical Modules are strongly recommended because non-Huawei-certified Optical Modules cannot ensure transmission reliability and may affect service stability. Replacing an optical module will interrupt services on the corresponding optical fiber. Wear ESD gloves or an ESD wrist strap.
