

Selection Guide for Low-Loss 800G Optical Modules for Intelligent Computing Centers

Overview

This guide provides a deep-dive technical comparison of the three dominant 800G module form factors— SR8, DR8, and 2xFR4 —analyzing their trade-offs in cost, power consumption, and link budget. Industry analysis suggests that in an optimized AI cluster, optical interconnects can account for 20-30% of the total Bill of Materials (BOM) and up to 25% of the total cluster power budget. Not all these need to be fully delivered for data center operators to benefit from 800G upgrades. By understanding the key. New Castle, Delaware – FS, a trusted provider of ICT products and solutions, has launched its cutting-edge 800G Linear Pluggable Optics (LPO) module. Designed for AI/ML applications, this advanced 800G DR8 OSFP finned top LPO module enables high-speed data transmission with ultra-low power. An 800G module is a high-speed transmission module commonly used in data centers, communication networks, and other areas requiring high-density data transmission and high-speed data processing. It boasts the extraordinary ability to process 8 billion bits per second, more than doubling the. The modulator chirp can be optimized for each channel and for a given maximum reach. These fiber modules play a critical role in enabling ultra-high-speed connectivity within modern network. When choosing a suitable 800G.
