

Snit optical cable

Overview

The SNIT QSFP28 100G Active Optical Cable (AOC) is engineered for high-speed data transmission, providing robust anti-interference capabilities. Ideal for telecommunications, data centres and networking applications, our fibre optic cables are available in single-mode and multimode configurations. These are cables that are designed to meet both the rigorous environment of the outdoors but also can be routed indoors, where flame rating requirements also apply. This type of indoor outdoor cable eliminates the need for a “transition splice” to an indoor-rated cable when routing an outdoor cable. Our extensive offering of fiber optic cables, connectors, cassettes, enclosures, patch cords, cable assemblies, cable distribution products and accessories deliver high performance, reliability, and scalability. Larger diameter bundles contain more fibers to carry light between the sensor and application.
