

The distribution box can use 380

Overview

With a rated voltage of 380V and current options ranging from 630A to 10A, this cabinet meets the GB/T 7251. 2-2023 standard, ensuring safety and performance. Ideal for industrial production, it effectively. Power distribution: The low-voltage power output from the transformer is accurately distributed to different branches such as the lighting system, air conditioning system, and shops in the shopping mall. It can also be adjusted according to the business format of the shopping mall area, and the. A distribution board (also known as panelboard, breaker panel, or electric panel) is a component of an electricity supply system that divides an electrical power feed into subsidiary circuits, while providing a protective fuse or circuit breaker for each circuit in a common enclosure. Normally, a. 1 Wide applicability: Suitable for 380V low-voltage metering boxes and various power distribution systems.
