

The fastest way to strip the fiber from the tray tail

Overview

The easiest way of doing this is to use aramid yarn shears (Kevlar™ cutters) designed specifically for the task. Remove the tight buffer coating using the 900µm strip cavity. Find an angle technique that works for you. Regardless of the stripping tools you use. Then I put them in the fiber holding moduals, flip the modual in a gainer (spin in completely around towards you) then place the modual in the tray. You should be left with 2 loops that can be folded into the tray one at a time. Sharp-edged slots in the jaws. The pigtail is a high-quality optical assembly manufactured using custom connectors to accomodate another fiber cable in a tray, rack or splice closer. These factory preterminated flat drop pigtails are the industry standard for existing FTTx installations.
