

The one in ensp is the core layer switch

Overview

The core switch functions as a DHCP server to allocate IP addresses to users in the campus. CloudEngine (CE) switches are high-performance core switches designed for data center networks and high-end campus networks, providing stable, reliable, secure, and high-performance Layer 2 and Layer 3 switching services. A VLAN is assigned to each department and services are transmitted between departments at Layer 3 through VLANIF interfaces of the switch CORE. Simulate the command line of pc 4. Only when you enter the system view, will you have. Here, You Can Find Huawei eNSP Configurations of Various Network Protocols on Different Network Topologies. These Configurations are Also used on Huawei Configuration Course on IPCisco and Huawei HCIA R&S All Labs Course on Udemy. It simulates enterprise routers, switches as close to the real hardware as possible, which makes the lab practice available and easy without any real hardware. Increase link bandwidth and enhance link reliability.
