BCH Thermal Overload Relays provides complete protection against overloads, single phasing, and severely unbalanced voltages—all in accordance with IEC 60947-4-1 / IS 13947-4-1. An overload relay is a motor protection device designed to: Unlike short-circuit protection devices (MCBs/MCCBs), overload relays respond to time-dependent overloads, closely matching the motor's thermal characteristics. When current exceeds safe limits for a sustained period, the relay. Selectivity is a mandatory requirement for all protection, but the importance of it depends on the application. For example, unselective protection operation during a medium voltage network fault will cause an outage for an unnecessarily large number of consumers. While this is bad, it's not a. We are a leading Wholesale Trader of bch thermal overload relay from Chennai, India. The relay is temperature compensated and offers on-site select ability of either. The widely used United States standard ANSI/IEEE C37. Even in those parts of the world where IEC standards are predominate, the use of ANSI numbering. BCH EOCR is a microprocessor based motor protection Relay with multiple protections including overload single phasing, phase reversal, phase unbalance, lock rotor, ground fault, under current which protect motors from premature failures in extreme conditions.
