

What is a multimode fiber optic connector

Overview

Multi-mode optical fiber is a type of optical fiber mostly used for communication over short distances, such as within a building or on a campus. 5 microns that enables multiple light modes to be propagated. The fiber connector types, sometimes referred to as terminations, link fiber optic cables together through terminals, switches, adapters, and patch panels, by bridging the gap between their. Multimode fiber (MMF) continues to play a critical role in today's high-bandwidth, short-range optical networks. While single-mode fiber (SMF) dominates long-distance and carrier-grade infrastructure, multimode fiber remains the most cost-efficient and practical choice for enterprise buildings. Multimode fiber optic connectors are designed for use with multimode fiber cables, which have a larger core diameter compared to single-mode fibers.
