

Which core of the yellow tail fiber is the armored pigtail

Overview

Armored Pigtails: Encased in a stainless steel tube or other strong metal within the outer jacket, armored pigtails are designed to provide additional protection to the fiber inside and enhance network reliability. A fiber pigtail is typically a fiber optic cable with one end factory pre-terminated fiber connector and the other exposed fiber. Compared with quick termination or epoxy and polish connections placed on the field. Pigtail, also known as pigtail, has only one end with a connector, and the other end is a broken end of a fiber optic cable core. Ultra-light, ultra-thin, ultra-fragile. 657 bend-insensitive for FTTH & tight spaces. Characterized by having an optical fiber connector on one end and a bare fiber end on the other, they are primarily used to connect optical transceivers or other optical. A pigtail fiber indicates a short length of optical fiber cable that has a pigtail connector (for example, SC, FC, ST, LC, etc).
