A Fiber Termination Box, also known as an optical termination box (OTB), is a compact, specialized enclosure designed for the organization, termination, splicing, and protection of fiber optic cables. It serves as a critical junction point within a network, providing a centralized and secure. To address this problem, the fiber termination box (FTB) was created to protect the fragile fiber terminals and provide a simple and clear way to manage the incoming and outgoing cables. It functions as a junction between the incoming fiber cable and the outgoing customer-side fiber cable, where one fiber can be spliced, patched. FTTP or fiber To The Premises applications have reinforced the importance of reliable and stable fiber optic terminations. Good quality fiber laying and termination systems help achieve minimal back reflection and low signal loss. Jumper Both ends of the jumper are movable connectors, which connect the pigtail and the device.
